ABOUT US

ICodeFactory™ is a company employing Microsoft Certified Trainers with high education and university degrees in IT related fields. Since the very beginning ICodeFactory™ has recorded steady growth year after year. We are providing our clients a variety of services – from software design and development to system engineering, consulting and IT education.

We are based in Novi Sad, the Capitol of the northern Serbian province Vojvodina. Traveling by car, Novi Sad is just an hour away from the Serbian Capitol Belgrade. From Belgrade, there are direct flights to all the major cities across Europe, including Hannover. Due to the fact that we work in the CET time zone (Hannover, Berlin, Rome, Budapest, Wien, Barcelona, Paris, Prague), we are able to respond to your requests immediately.

EDUCATION

Microsoft Official Curriculum

Is there any official Microsoft training you like? Our team of Microsoft certified trainers has great experience in teaching various Microsoft technologies and is always at disposal. If you are looking to adapt a Microsoft Technology or to enhance the level of knowledge throughout your staff, this is the way to do it.

Custom Trainings

Have you ever encountered a situation where your team lacked knowledge in a specific area and that knowledge was required to successfully conclude a project? Standard training programs are great, but in some circumstances, there are even better solutions. Often you do not have the time to fully train your team following standard training programs. Custom training is more effective, consumes less time, and brings back more value for money. You just compile a list of areas in IT you want to improve within your team, and we will deliver a custom training tailored to accommodate your specific needs. With lots of experience in providing various types of training, our experts have the necessary knowledge to design such courses.

You are not sure what is the knowledge you need? Your team members may have uneven knowledge levels, or you are unsure of their particular skills? We can offer you a service of profiling, where the current level of knowledge in a particular area is evaluated. Then we can give you exact information about employee knowledge and guide your team to success with our custom trainings service. Why is this important? This can mean much benefit to your team, as this way, fine details can be targeted by the specially designed training.

Distance Learning

Another area that is fast growing, distance learning, provides you with cost-cutting training on demand. With the technologies available today, distance learning can be just as efficient as direct training, while drastically cutting down on expenses and time. We can still provide you with any custom or Microsoft Official Curriculum trainings, with the only difference being it is done remotely.

IT SOLUTIONS

Custom Software Development

ICodeFactory™ is implementing a broad range of business solutions based on Microsoft, as well as open standard technologies.

- Visual C#
- VB.Net
- ASP.NET
- ASP.NET Ajax
- WCF, WPF, WF

System Engineering

Do you need assistance in other areas of IT? We can offer our expertise in System Engineering:

- Microsoft CRM
- Microsoft SharePoint
- Microsoft SQL Server
- Microsoft Exchange
- Windows Server
- Microsoft Hyper-V
- System monitoring

Difference

The unique blend of knowledge in both the areas of System Engineering and Software Development enables us to better understand both worlds, providing the opportunity to tackle

CONSULTING

Software Engineering

Do you have trouble beginning a new project using a technology your team is not entirely familiar with? Are you perhaps stuck in a dead-end situation where the team is not sure which path to follow? Or you perhaps just need some assistance choosing the right software architecture or picking the appropriate technologies? Is the performance of the software not up to the requirements set by the stakeholders? Solving high level tasks and problems is not an easy task. Experts with valuable experience can help you solve these problems. Once they are done, your team can once again take over with newly acquired knowledge and lead the project to its successful end.

System Engineering

Is the integration of different software not working as planned? The system is not compatible with the required environment? Or do you just need some assistance setting up the infrastructure so your team can kick in and start producing? These are just some of the challenges or incidents our experts successfully solved in years of providing consulting services to various clients. Some of the fields in which we are able to assist you are Information Worker Solutions, Networking Infrastructure Solutions, Virtualization, Server Platform Solutions, Security Solutions, Data Management Solutions or Communications Solutions.

Difference

Hands on experience and past consulting services combined with the rich history of trainings lets us solve a broad range of problems both in software development and general IT solutions. Our flexible consultative approach guarantees that short term or long term, onsite or offsite, we can provide the professional resources you need.
